

Mount Carmel Inpatient Rehabilitation Center

2007 Outcomes Report

In 2007, the Mount Carmel Inpatient Rehabilitation Center served 460 patients in their quest to live as independently as possible after sustaining serious injuries or illnesses.

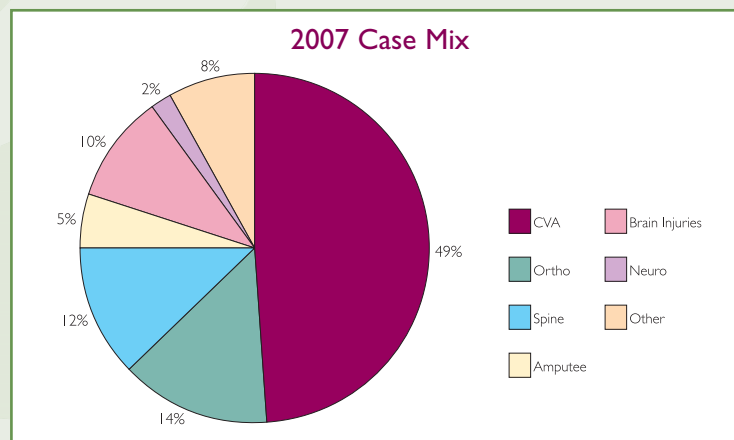

Functional Outcomes

The graph below compares our patients' motor functional independence measurement (FIM) changes with those of the region and the nation.

Success Rates

The 2007 case mix represents the percentage of patients admitted by diagnostic category. The case mix is outlined in the chart below.

Mount Carmel Inpatient Rehabilitation Center

2007 Outcomes Report (continued)

Our patients had an average overall length of stay of 13 days, during which they received an average of three hours of therapy per day in a combination of occupational, physical and/or speech therapy. Additional services included recreational therapy, nursing education, case management and almost daily medical management.

73% of our patients were able to return to home after their stay. The graph below shows the discharge rate by diagnostic category.

Following discharge, patient satisfaction surveys were sent to our patients for feedback on their stay. Our results were as follows:

- 93% of patients were satisfied with the overall quality of care and services
- 97% said they would definitely recommend our program to family and friends

We are also pleased to report that the Mount Carmel Inpatient Rehabilitation Center was successfully re-accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF) as a Comprehensive Inpatient and Stroke Specialty Program.

**Admission to the center requires a referral from a licensed professional.
For more information or to make a referral, call 614-234-1362.**
